SUMMARY

Computer Systems Engineer with 3+ years building software and 1+ year shipping production generative AI. I design multi-agent systems on Amazon Bedrock and Bedrock AgentCore, the serverless AWS APIs that connect them to business systems, and the React and TypeScript products on top. AWS Certified AI Practitioner, open to remote roles.

TECHNICAL SKILLS

Generative AI & Agents: Amazon Bedrock, Bedrock AgentCore, Claude (Sonnet/Opus), Strands Agents, LangChain, multi-agent orchestration, tool use and function calling, RAG, prompt engineering, guardrails, MCP, LLM observability

Cloud & DevOps: AWS (Lambda, CDK, Cognito, S3, DynamoDB, ECR, API Gateway, IAM, VPC, Copilot), Google Cloud (Run, Functions, BigQuery), Huawei Cloud, Docker, CI/CD, Git, GitHub Actions, Bitbucket Pipelines, Linux

Backend & Data: Python, Java, C#, SQL; Node.js, Express, Spring Boot, FastAPI, REST APIs, serverless, WebSockets; SQL Server, PostgreSQL, MySQL, SQLite, Redis/Valkey, Pandas, Scikit-learn, XGBoost, ETL, Power BI

Frontend & Mobile: TypeScript, React, React Native, Expo, Astro, Tailwind CSS, Monaco Editor, offline-first architecture, Vite, Vitest, Jest

PROFESSIONAL EXPERIENCE

Generative AI Engineer

Jun 2025 – Present

Irakani (Iteradapta), Remote, Mexico

- Designed and shipped production AI agents on Amazon Bedrock AgentCore with Claude Sonnet 4.5, letting non-technical users query in natural language data that used to require SQL or engineering support.
- Architected a multi-agent system in Python where an orchestrator classifies intent, delegates to domain-specialized agents and consolidates the answer, replacing an undebuggable monolithic prompt.
- Built the tool-use layer connecting agents to business APIs, with execution-plan validation, structured error handling and per-user and per-workspace conversational memory.
- Owned the feature end to end: Python agents, serverless AWS Lambda APIs, React and TypeScript interface, and containerized deployment.

Application Developer

Sep 2024 – Jun 2025

Irakani (Iteradapta), Remote, Mexico

- Designed and implemented a C# integration interface with a commercial ERP system, removing manual data re-entry between platforms.
- Developed and maintained internal business applications in Java and SQL Server, optimizing schemas and queries for high-volume reporting.

Software Developer

Jun 2023 – Mar 2024

SightWise Tech, Mexico

- Built a Python and PyQt desktop application on embedded Linux (Raspberry Pi) replacing a manual product-evaluation process with automated condition classification, with user authentication and encryption of sensitive data under secure development practices.

SELECTED PROJECTS

Offline-First Enterprise Mobile Application

2025

React Native, Expo, TypeScript, SQLite, Firebase, EAS Build

- Local SQLite store with an ordered event queue; background sync replays pending events unattended on reconnect. White-label monorepo pipeline serving multiple clients from one codebase.

Mini Donas Arenita, Ordering System

2025

React, Node.js, Express, PostgreSQL, Vercel

- Customer portal and admin panel replacing manual order taking. github.com/AngelMariscal01/MDA

EDUCATION

B.Eng. Computer Systems Engineering, Tecnológico Nacional de México. Cloud and Cybersecurity track.

2020 – 2025

CERTIFICATIONS

AWS Certified AI Practitioner, Amazon Web Services

2025

Huawei Cloud Developer Associate (HCCDA – Tech Essentials), Huawei Cloud

2025

Data Science Bootcamp, Soy Henry

2024

AWARDS AND LANGUAGES

1st place, XI Local Programming Contest, advanced category, TecNM

2023

2nd place, XII Local Programming Contest and ITESZ Hackathon, TecNM

2024

Languages: Spanish (native), English (technical reading and writing). Coding Cup Michoacán, 2024.
